

HOME AUTOMATION

Protect your loved ones, home and property around the clock..
Get the convenience, safety and security of an automated home.
We can integrate security, lighting control, energy management,
camera surveillance even home audio.

The system is easy to understand and operate, even children can
learn the basic features.

Can be controlled over the internet or telephone.

Benefits of an automated home

An automated home coordinates security, temperature, lighting, audio/video automatically for safety, energy savings and convenience. Automatically dimming lights and changing heating and cooling set-points when you're away from home can greatly reduce energy costs. Remote access lets you view security video on laptop or Smart-phone. Adding home automation can also increase the value of your home.

GSM telephone line back-up

The weak point in any alarm system is always the telephone line. A GSM communicator takes over if the telephone lines are cut accidentally or on purpose. It uses the G3 network to report alarm signals directly to the monitoring station ensuring fast reliable alarm reporting. It can even work on its own without a regular land line. We are seeing more occurrences of thieves taking out the phone lines before a break-in and believe our customers should seriously consider this add-on to their system. Contact our office for information

FLOOD SENSORS

Protect your home from flooding due to sump pump failure. The monitoring station is alerted as soon as the water reaches a pre-determined level and can advise the home owner or another person responsible for looking after your house

Important information for customers with sump sensors

The sump sensors we install on our alarm systems are a float style sensor. An alarm is triggered when water in the sump pit raises the float on the sump sensor. It is important to test this sensor regularly (at least monthly but we recommend weekly) to ensure that the float moves freely and triggers an alarm. We have seen times when a flood occurred in the basement and an alarm was not triggered because debris or dust in the sensor itself impeded the movement of the float.

To test your sump sensor, first call the central station at 1-800-363-8145 and tell them you wish to test your alarm system. Then, lift the float on the sump sensor. It should move freely without any friction. If its action seems to be restricted in any way, try moving it up and down several times. This usually frees it. If it still will not move freely or no alarm is triggered when you lift it, the sensor may need to be changed.

SYSTEMS TUNE-UP

INCLUDES:

CLEAN & TEST SYSTEM BATTERY (REPLACE IF NECESSARY)

CLEAN & ADJUST SENSORS (MOTION, SMOKE, GLASSBREAK DETECTORS).

RESET DOOR & WINDOW CONTACTS

INSPECT & REPAIR CONNECTIONS, DIALER & PROGRAM TEST

FREE CONSULTATION FOR IMPROVEMENT & ADDITIONS

FREE 3 MONTHS SERVICE FROM TIME OF TUNE-UP(1 SERVICECALL)

ONLY \$59.50 (RESIDENTIAL SYSTEMS ONLY)

Medical Monitoring System

A growing number of people are looking for personal emergency protection. This Personal Emergency Response System is the ideal solution for them and for people with medical problems. They can enjoy living in their own homes longer - independently. For information call 613-937-4430

SYSTEM TEST (SHOULD BE PERFORMED AT LEAST WEEKLY OR MONTHLY)

- TESTING YOUR SYSTEM-

We recommend that you test your alarm system at least once a month. The procedure is as follows:

1. Call the central station at 1-800-363-8145.
2. Give the operator your name, system # and passcode.
3. Arm your system and trip a zone (create an alarm)
4. Disarm and reset your system.
5. Call the central station again to verify that your signals were received and tell them you have completed your test.

It is your responsibility to test your system regularly.

Also, you should test your system every time your telephone company does service at your premises.

We at Alliance provide a full line of security services to a wide

range of residential, commercial and industrial customers:

from alarm systems to camera surveillance, access systems ,Home Automation and medical alert communicators.

We encourage you to call us to answer any concerns you may have at 613-937-4430.

Our after hour emergency service telephone number is 613-937-0918.

-FALSE ALARMS –

The central station telephone # is 1-800-363-8145 to cancel any false alarms.

If you accidentally cause a false alarm, just enter a valid code into your keypad to silence the siren and call the central station immediately giving them your name and P.I.N. in order to avoid false dispatch of the authorities.

Please make sure that you always advise our office of any keyholder change at 613-937-4430
